

Product Overview

- It is a device that connects nurses' station with all sub-stations.
- It is required one per a room(TB-065) and one per two rooms(TB-065A).
- TB-065 can cover eight nurse callers and three sub-stations such as emergency caller, presence switch, and corridor light. TB-065A can cover 4 nurse callers and two emergency callers, and 2 corridor lights except presence switch.
- Compression joint terminal is used in this device.
- Screwless terminal used in other terminals makes installation and management easier.
- Control circuit and terminals are separated so you can only change the circuits If there's any breakdown in it.
- The exterior covering is made of steel so it can block any noise.
- Dimensions : 146mm(W), 78mm(H), 49mm(D)
